AMENDMENTS TO THE CLAIMS:

This listing of the claims will replace all prior versions, and listings, of the claims in this application.

Listing of Claims:

1. (Currently Amended) A method, comprising:

for shifting ~~a content of~~ a first shortcut key ~~and a~~ with its attached content ~~of~~ to a second shortcut key; and
~~belonging to a user interface of an electronic device, in which method the contents of the first shortcut key and~~ shifting the second shortcut key ~~are shifted between each other by making a drag and drop operation~~ with its attached content to the first shortcut key by performing one drag and drop operation from the first shortcut key to the second shortcut key using a user interface of an electronic apparatus.

2. (Currently Amended) The method according to claim 1, wherein ~~one of the following is used as~~ the electronic ~~device~~ apparatus is embodied in one of: a cellular network terminal, a PC, a portable computer or a palm computer.

3. (Currently Amended) The method according to claim 2, wherein a touch screen is used as a display unit of the electronic ~~device~~ apparatus, ~~whereby~~ and a shortcut menu is created on the touch screen.

4. (Previously Presented) The method according to claim 3, wherein the first shortcut key to be shifted is selected to become a shifted shortcut key by pressing the touch screen with the aid of an object at a position of the first shortcut key.

5. (Previously Presented) The method according to claim 4, wherein the content of the first shortcut key is shifted to become the content of the second shortcut key by moving the

object used in the selection on the touch screen from a position above the first shortcut key to a position over the second shortcut key, where the object is raised from the touch screen, whereby the raising of the object initiates the shifting of the content of the first shortcut key to become the content of the second shortcut key.

6.   (Previously Presented) The method according to claim 4, wherein a function attached to the first shortcut key is executed when the object used to select the first shortcut key is raised from the touch screen above the first shortcut key.

7.   (Currently Amended) The method according to claim 4, wherein a raising of the object used to select the shortcut key from the touch screen somewhere else than above a shortcut key cancels the ~~initiated~~ shifting of the contents of the first shortcut key.

8.   (Currently Amended) The method according to claim 2, wherein the first shortcut key is selected to become shifted by selecting it among the shortcut keys on the display of the electronic ~~device~~ apparatus with a button of a mouse belonging to the user interface of the electronic ~~device~~ apparatus.

9.   (Currently Amended) The method according to claim 8, wherein the content of the first shortcut key is shifted to become the content of the second shortcut key by moving a cursor connected to the mouse on the display of the electronic ~~device~~ apparatus from a position above the first shortcut key to a position above the second shortcut key, where the mouse button is released, whereby the releasing of the mouse button initiates the shifting of the content of the first shortcut key to become the content of the second shortcut key.

10.   (Currently Amended) The method according to claim 8, wherein when the mouse button used to select the shortcut key is released on the display of the electronic ~~device~~ apparatus somewhere else than above a shortcut key, then the ~~initiated~~ shifting of the content of the first shortcut key is cancelled.

11.   (Currently Amended) The method according to claim 9, wherein the shifting of a shortcut key made on the display of the electronic ~~device~~ apparatus further causes the functions attached to a first key belonging to ~~the~~ a physical keyboard of the electronic ~~device~~ apparatus to be shifted to a second key of the keyboard.

12.   (Currently Amended) The method according to claim 5, wherein the content of a shortcut key ~~means~~ is a function defined for a shortcut key.

13.   (Currently Amended) A touch screen comprising:

a shortcut menu comprising at least ~~two separate shortcut keys,~~ a first shortcut key and a second shortcut key ~~with interchangeable contents, and,~~ where the first shortcut key and the second shortcut key each have attached content; on which touch screen a shift of the first shortcut key with its attached [[a]] content ~~of the first~~ to the second shortcut key and a shift of ~~content of~~ the second shortcut key with its attached content to the first shortcut key ~~between each other~~ is configured to be made by performing one [[a]] drag and drop operation from the first shortcut key to the second shortcut key.

14.   (Previously Presented) The touch screen according to claim 13, wherein the first shortcut key is selected to become shifted by pressing the touch screen with an object at the first shortcut key.

15.   (Previously Presented) The touch screen according to claim 14, wherein the content of the first shortcut key is configured to be changed to become the content of the second shortcut key by moving the object used for selecting on the touch screen from a position above the first shortcut key to a position above the second shortcut key, where raising of the object from the touch screen is configured to initiate the shifting of the content of the first shortcut key to become the content of the second shortcut key.

16.   (Previously Presented) The touch screen according to claim 14, wherein a function

attached to the first shortcut key is configured to be executed when the object used to select the first shortcut key is raised from the touch screen above the first shortcut key.

17.   (Previously Presented) The touch screen according to claim 14, wherein the raising of the object used to select the first shortcut key from the touch screen somewhere else than above a shortcut key is configured to cancel the initiated shifting of the content of the first shortcut key.

18.   (Previously Presented) The touch screen according to claim 13, wherein a content of a shortcut key is a function defined to be executed by the shortcut key.

19.   (Currently Amended) An ~~electronic device~~ apparatus comprising: ~~a user interface comprising at least two separate shortcut keys,~~ a display configured to display a first shortcut key, and a second shortcut key ~~with interchangeable,~~ where the first shortcut key and the second shortcut key each have attached content; and ~~contents, in which~~

a user interface configured to [[a]] shift ~~of a~~ the second shortcut key with its attached content ~~of~~ to the first shortcut key and ~~a content of the second shortcut key between each other is configured to be made~~ shift the first shortcut key with its attached content to the second shortcut key by performing one [[a]] drag and drop operation from the first shortcut key to the second shortcut key.

20.   (Currently Amended) The ~~electronic device~~ apparatus according to claim 19, wherein the ~~electronic device~~ apparatus comprises a touch screen, configured to operate as the display and the user interface, where on ~~which~~ the touch screen there is formed a shortcut menu with at least two shortcut keys with interchangeable contents.

21.   (Currently Amended) The ~~electronic device~~ apparatus according to claim 20, wherein a content of a shortcut key is a function defined to be executed by the shortcut key.

22.   (Currently Amended) The ~~electronic device~~ apparatus according to claim 21~~, wherein it is~~ embodied in one of ~~following~~: a cellular network terminal, a portable computer or a palm computer.

23.   (Currently Amended) A computer readable storage medium comprising an application program executable by a central processing unit to perform actions comprising:

~~for~~ shifting ~~a content of~~ a first shortcut key ~~and a~~ with its attached content ~~of~~ to a second shortcut key; and

~~belonging to an electronic device's user interface, the application program comprising computer readable code means for executing the shift of the contents of the shortcut keys between each other utilizing a drag and drop operation~~

shifting the second shortcut key with its attached content to the first shortcut key by performing one drag and drop operation from the first shortcut key to the second shortcut key.

24.   (Currently Amended) The computer readable storage medium comprising an application program according to claim 23~~, which comprises computer readable code means for~~ embodied in a portable device, and executable to shift ~~changing~~ the shortcut keys in a shortcut menu created on a touch screen~~, which belongs to a~~ of the portable device.

25.   (Currently Amended) The computer readable storage medium comprising an application program according to claim 24, ~~wherein said computer readable code means realize~~ comprising:
[[–]] ~~a selection of~~ selecting a first shortcut key~~, whereby the selection is made~~ by pressing the touch screen with an object; and
[[–]] ~~a detection~~ detecting whether the object is raised from the touch screen at a position of the selected first shortcut key~~;~~ and when the object is not raised at the position of the selected first shortcut key~~;~~ it further ~~comprises~~ comprising~~;~~:

6

[[−]] a detection of detecting a movement of the object on the surface of the touch screen away from the position above the first shortcut key;

[[−]] a detection detecting whether the object is raised from the surface of the touch screen at a position of the second shortcut key; and

[[−]] in that case an interchange of if the object is raised then interchanging the content of the first shortcut key and the content of the second shortcut key.

26.   (Currently Amended) The computer readable storage medium comprising an application program according to claim 25, which further comprises computer readable code means, which execute comprising executing a function connected to the first shortcut key, when the object is raised from the touch screen at the position of the first shortcut key.

27.   (Currently Amended) The computer readable storage medium comprising an application program according to claim 25, which further comprises computer readable code means, which cancel comprising cancelling the shifting of the content of the first shortcut key, when the object is raised from the touch screen in an area, which is not defined to belong to a shortcut key.

28.   (Currently Amended) The computer readable storage medium comprising an application program according to claim 23, wherein a content of a shortcut key is a function defined to be executed by the shortcut key.

29.   (Currently Amended) The computer readable storage medium comprising an application program according to claim 28, which is configured to be used in one of the following devices: embodied in one of a cellular network terminal, a portable computer or a palm computer.

30.   (Cancelled)
